Department of Pathology Laboratory  
Molecular Diagnostic Laboratory Report

**Specimen Information**

Nasopharyngeal Swab And Throat  
Swab

Collected 20-Dec-2021 11:42 am  
Received 20-Dec-2021 1:47 pm  
Report Generated 20-Dec-2021 3:23 pm

**Test Name**

**Result**

**Non-panel Item**

**Real Time PCR for COVID-19 Virus** Negative

**Test platform:**

**Instrument:** QuantStudio 5

**Test Kit:** Novel Coronavirus (2019- nCov) Nucleic Acid Diagnostic Kit, Sansure Biotech Inc.  
**Test Chemistry:** Qualitative Real-Time PCR based on TAQMAN Probing Chemistry.

**Target Selection:** ORF 1ab and N genes

**Detection limit:** 200 copies /ml

**Technical Note:**

Test result "**Negative**" means COVID-19 virus is absent in the given sample. However, it does not rule out the presence of COVID-19 in patient as the test may be affected by the stage of infection, quality of collected sample, degree of viral multiplication & clearance and by the mutation in the target sequence 2019 nCov.

Moreover, reported COVID 19 RT PCR assay detection rate is about 65-70%. It is, therefore, recommended to correlate the test result with clinical findings of the patient.

PCR inhibition is ruled out by the correct amplification of the internal control and positive control.
